Exp No:6 Date:

Aim:

To create a Python based FTP scanner using FTP lib module that

- checks if a Public FTP server allows anonymous login
- lists the contents of directories on the server.

Procedure:

- import the built-in ftplib module.
- write two python scripts
- Sender side: connects to the FTP srver. in anonymously & lists the root directory.
- Receiver side: connect anonymously & lists a specific sub-directory.
- Run the scripts in google colab or any python.
- Observe the login status, server message, and directory contents.

CODE:-

Server side code:-

#! /usr/bin/env python3 import

FTP lib

def anonymous login (hostname):

try:

ftp = ftplib.FTP(hostname) #

= FTP.login ('anonymous', 'anonymous')

Print(response)

if "230" in response:

Print ("[+]" + str(hostname) + "FTP Anonymous login

Succeeded").

print ("Welcome Message: \n",

ftp.getdocname &&) Print ("In Directory

Listing: ") ftp.dir() ftp.quit()

else:

print ("[-]" + str(hostname) + "FTP

Anonymous Login Failed ") Print ("Error:" + str

(e))

'ftp.br.debian.org"

anonymous login (hostname).

Receiver Side code:-

```
import ftplib
def check_anonymous_connection(host, path):
    try:
        with ftplib.FTP(host) as connection:
            connection.login('Anonymous', 'anonymous@')
            print("welcome:", connection.getwelcome())
            print("welcome:", connection.getwelcome())
            connection.cwd(path)
            for name, details in connection.mlsd():
                print(name, details['type'], details.get())
    except Exception as e:
        print("error:", str(e))
```

O/P:-

230 Anonymous access granted, apply [+] Ftp to.debian.org FTP Anonymous.

Login Succeeded

welcome Message:

220 ProFTPD Server [mirror.os35.net]

Directory listing:

Result:-

The script successfully connected to the FTP server.

It verified anonymous login as followed the directory contents were retrieved and displayed.
