Exp No :- 2

Date :- 23/7/26

Aim :-

To know IP Addressing and manually assign an Ip address to a computer. To verify the Assigned Ip Address using Linux networking.

Theory :-

An Ip address is a unique commercial address assigned to every device connected to a network. It enables communication b/w device over a network An IPv4 address consists of four octets separated by dots.

~~An Ip~~ Manually Asigned Ip address remain unless changed by the user along with the Ip address. Parameter incus the subnet.

Commands & Sample output :-

1) display all Ip address.

command:

Ip address show

Sample output

2: ens 160:

inet 172.16.21.128/24

inet6 80::20c:291f:fe75:9927/64

observation:-
Displays the IPv4 and IPv6 address by all networks.

2. Display and specific network interface command.
ip addr show dev ens160

Sample output.
2: ens160
inet 172.16.211.128/24.

Result:-
The Ip Address users manually assigned and verified successfully using LINUX NE.
