Exp No :- 3

Date : 23/7/26

Aim :-

To study different types of network cables & understand the crimping process using an RJ45 connector.

Concept :-

Network are used to connect computers and other networking device for data communication. the most commonly used cable in LAN is the unshielded Twisted pair (UTP

Types of Network Cables :-

Cable Type	Description
UTP (unshielded Twisted Pair)	Commonly used for Ethernet LAN's and office network.
STP (Shielded Twisted Pair)	used in area with electrical or Electromagnetic interference.

Crimping Procedure :-

1) Cut the UTP cable to the required length.
2) Strip about 2.3 cm of the outer insulation.
3) Arrange the wires According to the 568B Standard.

Observation:-

1) The wires were arranged according to the TS68B standard.
2) The RJ45 connector crimped successfully.
3) The cable tester indicated proper connect.

Result:-

The different types of network cables were studied and the UTP cable was successfully and RJ45 connectors and tested for proper connectivity.

EXP NO:- 4

Aim:-

To implement sockets in pu
packets passi

Objective:-

To understand
how network
analysis serv

Theory:-

- Packet is the
process across
