Date:- 24/2/26

EXP NO:- 5

Aim:-
To test verify the connectivity separate the local computer and remote servers using the ping commands in Windows.

Theory:-
The ping command is a basic network utility used to check whether a host is reachable across an IP network. It means the round trip time for messages ~~from~~ the source to a destination & return is done.

Purpose of Ping:-
The main purpose of it to test network connectivity b/w two devices.

Procedure:-
1. Basic ping command
Ping www.google.com

O/P:-
Displays the IP address of the server, the number of packet sent to Recived.

2) Ping localhost command

Ping localhost

O/P:-

Pipline from 127.0.0.1 confirms the TCP/IP stack on the local system is working properly.

3) Ping using IP address command

Ping 8.8.8.8

O/P:-

Displays connectivity ~~~~ between your systems.

4) connections ping test command

Ping www.google.com-t

O/P:-

continuously pings the screen until stopped manually.

5) Ping with specific number of request command.

Ping www.google.com-n5

O/P:-

sends commands & reseifs with average time.

Result :-

The ping commands were successfully executed in the windows Commands prompt the packet transmission status b/w the computers & servers were verified.
